

KHUSHAL MEHTA

+1 (548) 881-0772 | khushaldemehta@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Legally authorized to work in Canada

EDUCATION

University of Western Ontario

Bachelor of Science in Computer Science | GPA: 3.9/4.0

April 2026

London, Ontario

EXPERIENCE

Software Engineer, AI

Enterprise Logistics Platform (Stealth)

May 2026 – Present

United States (Remote)

- Architected an AI-powered supply chain integration layer connecting enterprise ERP data to an LLM natural language interface, reducing complex logistics query times from hours to <2 seconds across 1M+ daily data points
- Designed unified data schemas and RAG retrieval pipelines, cutting custom client integration overhead by 40% while maintaining 95%+ retrieval accuracy
- Engineered scalable data pipelines and AI integrations across 10+ enterprise client deployments, processing 2TB+ of daily telemetry data at 99.9% uptime
- Served as primary technical liaison for North American deployments, slashing client onboarding time from 6 weeks to 10 days and accelerating sales deal cycles by 30%

AI Engineer Intern

Zintlr AI

May 2025 – December 2025

- Engineered a real-time ML optimization pipeline on AWS (SageMaker, EC2, S3), cutting infrastructure costs by 30% via automated scaling
- Developed Python microservices on AWS Lambda and DynamoDB serving AI features, processing 10,000+ daily payloads at sub-second p99 latency
- Built Pytest unit and integration suites (90% coverage) and automated CI/CD with GitHub Actions
- Monitored production AI services with AWS CloudWatch, sustaining 99.9% uptime

PROJECTS

CodeArena | [GitHub](#) | *Node.js, Python, Docker, Redis, PostgreSQL*

January 2026

- Architected a distributed code execution engine isolating untrusted code in Docker containers with seccomp filtering and strict CPU/memory limits to prevent sandbox escapes and fork bombs
- Built a BullMQ (Redis) task queue handling 50+ concurrent submissions at sub-3s p99 latency
- Built a WebSocket and Redis Pub/Sub notification layer delivering execution updates in under 200ms with automatic reconnection

PennyWise | *Next.js, TypeScript, Google Gemini API, Tailwind CSS*

June 2025

- Built a full-stack AI finance platform with Next.js App Router, using Upstash Redis rate limiting to control Gemini API costs
- Optimized initial load performance to under 1 second TTI using Next.js SSR and lazy-loaded dynamic imports
- Designed secure authentication and a real-time budget dashboard with Zustand

Theater Reservation System | *C, POSIX Threads, Mutex Synchronization*

November 2024

- Built a multi-threaded seat reservation system in C handling 100+ simultaneous requests with zero race conditions
- Implemented seat-level mutex locking with lock ordering to prevent deadlocks across shared memory

LANGUAGES & TECHNOLOGIES

Languages: Python, Java, TypeScript/JavaScript, C/C++, SQL

Backend & Systems: Node.js, Express.js, Flask, REST APIs, WebSockets, Redis

Cloud & DevOps: AWS (Lambda, EC2, S3, SageMaker, CloudWatch), Docker, GitHub Actions, Linux/Bash

Databases: PostgreSQL, DynamoDB, MongoDB

Frontend: React, Next.js, Tailwind CSS, Zustand, TanStack Query
